

From the office of Frank E. Delmonico, D.D.S. (401) 783-1975

POST-OPERATIVE INSTRUCTIONS
TEMPORARY "FLIPPER" PARTIAL

1. This acrylic, removable partial is only a temporary solution. In the future, a stronger partial denture or some type of fixed bridgework or implant will be necessary.
2. This partial may alter your speech.
3. There will probably be some shrinkage around the extraction site, therefore, this partial may need to be relined in the future. We will reline this partial at no cost anywhere within three months after it is originally delivered to you. After that time, you will be responsible for any relining fees.
4. This partial is not as strong as a regular partial denture. You must be careful when eating or when you handle it.
5. This partial should be removed before you go to sleep. Try to leave it out as much as possible to cut down on irritation of the gum tissue.
6. To clean this partial, remove it from your mouth, and brush it with your toothbrush. You may also use products such as Efferdent or Polident for heavy stain.
7. Denture adhesive can be used to help retain the partial in your mouth.
8. If you have any problems with this partial, please call us immediately. We would be happy to correct these problems.
